Learjet TFE731  
Inlet Nacelle

# Learjet TFE731 Inlet Nacelle

Frustrated with expensive and recurring inlet repairs?

Call the experienced technicians at Fargo Jet Center Inc., a full service, 24-hour aviation service company and FAA approved repair station. Fargo Jet Center can repair your existing inlet or get you up and running within a day by exchanging your inlet for a superior product, reducing operating costs and saving valuable time.

## Inlet Improvements

Realizing the need for heavier inlets, Fargo Jet Center engineered a stronger, more durable inlet cap to enhance the quality and life span of an inlet nacelle. By using a

nose cap material thicker and three times stronger than production nose caps, the inlets significantly increase resistance to ice and hail damage.

- Improved nose caps are available for Learjet models: 31, 31A, 35, 35A, 36, 36A, 55
- Produced under FAA Supplemental Type Certificate number ST01218CH

## Services

- Inlets repaired at a professional repair station by experienced technicians
- Exchange inlets offered at competitive rates for quick turn around
- High-quality loaner inlets available during repair process
- Thorough visual inspections ensure total customer satisfaction
